his career have now become the standard approach in the stability analysis of bipedal locomotion used by researchers internationally. He has made several fundamental contributions to Rigid Body Impact Mechanics including the solution of multi-contact problems that has since been established as the main method in mathematical modeling of contact problems in robotics. He also discovered the existence of micro collisions and their effect on rigid body impacts. This discovery challenges an inconsistency in Newton's definition of the restitution coefficient and offers a new method to resolve the inconsistency. One expert even referred to Dr. Hurmuzlu's contribution to impact theory as "probably the most significant since Newton."

In addition to world-class research, Professor Hurmuzlu has established a reputation as a first

His work on Russian law has been noted by name by the editors of *The New York*

eighth book, *Russia's Food Revolution: The Transformation of the Food System*, is set for release this year and work is underway on the next.

Wegren is often funded for his research, typically from foundations such as the Rosa Luxemburg Foundation and the Norwegian Research Council, in amounts generally under \$50,000. Last semester, for example, answers to the question, "Why is civil society in the United States so weak?" led to a book, "The Decline of Civil Society in the United States" edited by Wegren and published by the University of Texas Press. The book is a collection of essays by leading scholars in the field of civil society and is a valuable contribution to the understanding of the decline of civil society in the United States.

Again, please join me in congratulating and thanking these exceptional faculty for their extraordinary service to SMU and our students!

Sincerely,
